

User Documentation

Installation Instructions

1. Locate the APK files from <https://github.com/sarajuju12/StuBnB/tree/main/StuBnB/apk>, and download the most recent (latest version) APK file, stubnb4.0.0.apk
2. Open an IDE (either Android Studio or IntelliJ)
3. From the top menu bar, go to:
 - Android Studio: Tools -> Device Manager
 - IntelliJ: Tools -> Android -> Device Manager
4. Under Device Manager, go to (or stay on) the Virtual tab
5. Under the Virtual tab, click on the "Create device" button
 - A pop-up titled "Virtual Device Configuration" should appear
6. Under the "Phone" category, select "Pixel 6 Pro" and click the "Next" button
7. If not yet downloaded, download any system image whose "API Level" is 30+
 - Once downloaded, select that system image and click the "Next" button
8. Select "Portrait" to be the start-up orientation and click the "Finish" button
 - Under Device Manager, the new device should appear
9. Under the "Actions" column of the Device Manager tab, click the play/run icon that is located on the same row as your Pixel 6 Pro
 - Hovering over the play/run icon shows the text: "Launch this AVD in the emulator"
10. Once the Android Emulator has been successfully launched, drag and drop stubnb4.0.0.apk, which you have downloaded in step 1, into the virtual device
 - An app with the name "StuBnB" should appear on the virtual device
11. Click on the newly downloaded app "StuBnB" to launch it and use it as you please!

Main Features Guidelines
